Agency Management

**Proven solution
for 10 years**

**Used at over 60
NHS organisations**

**Over £36 million
saved across the NHS**

mii Agency Management gives effective support and management for your temporary workforces. Provided using our TempRE platform, it is a robust solution which:

- ✓ Helps NHS organisations facilitate direct fixed term contracts with workers, sourced and vetted by agencies.
- ✓ Provides full control and visibility of agency supply chain management, standard agency placements and Framework rate card management.
- ✓ Has been supporting NHS organisations for ten years, and is a proven approach to the effective management of temporary workforces having been utilised at more than 60 NHS organisations during that time.
- ✓ Gives NHS organisations the savings, control, visibility, IR35 compliance, and assurance the right tax is being paid when contracting temporary staff directly whilst using the same agencies and workers they always have done.
- ✓ Maximise fill rates with the Liaison Workforce TempRE mobile app. Workers receive notification of bank shifts relevant to their skills and availability and can confirm shifts, sign contracts, and submit timesheets and expenses in real time, on the move.

Our fully-managed service provides a unique combination of technology, high-level expertise and on-the-ground support mitigating any potential risks to trusts when choosing to employ temporary staff.

There remains a huge workforce challenge around long term vacancies and unplanned absence contributing to vacant shifts across our NHS hospitals. We partner with trusts across the UK to drive agency spend down via mii Agency Management, and encourage the implementation of temporary staff banks to fill vacancies. This saves the NHS over £36 million per year through bank and ADE placements."
