

Outpatients Transformation. Delivered.

Address the waiting lists in outpatients using a digital tool

Over 50,000 outpatient appointments saved, releasing valuable clinical capacity

Over 56,000 patients added to long term condition management since go-live (May 2022)

5%+ long term condition management rate maintained

Only 7.8% of those on a long term condition management pathway have requested a follow-up appointment

“Our Digital Health team have successfully integrated new digital platforms so that specialities can now send online assessment forms to patients to help monitor outpatients with longer-term follow up needs.

This helps to free up clinician time for new appointments, procedures and for outpatients who need us the most.”

Sam Higginson
CEO, Norfolk and Norwich University Hospitals NHS Foundation Trust

“The NHS’s most ambitious outpatient project.”
The Health Service Journal

The Challenge

Waiting lists continue to grow in outpatients; patients are waiting longer than ever, not just for surgery, but for outpatients or follow up appointments. Trusts are not able to move beyond their current statuses, and there is no funding for more digital solutions.

Norfolk and Norwich University Hospitals NHS Foundation Trust (NNUH) had a requirement to reduce unnecessary appointments and free up clinical time for those patients needing care the most.

The Solution

NHSE funded the first wave of solutions for outpatients, and HSJ recognised the work at NNUH as the most ambitious of those projects.

The project continues to deliver over and above any other outpatient digital long-term condition management solution implemented nationally due to its unique structure.

This solution has been rolled out across 47 specialties, giving patients flexibility over their follow-up appointments. Instead of routine follow-up appointments being automatically booked, patients decide if they would like an appointment and requested it themselves at a convenient date and time.

The Outcomes

- 50,000+ unnecessary appointments avoided, releasing clinical time for elective recovery
- Over 56,000 patients put onto a long term condition management pathway since go-live (May 2022)
- 5%+ long term condition management rate maintained and working towards 8%
- Only 7.8% of those on a long term condition management pathway have requested a follow-up appointment
- 47 specialties and 186 active pathways with more being added every day
- Average patient satisfaction score of 4.2 out of 5
- Increased volume of patients onto long term condition management pathways whilst not risking them being ‘lost to follow up’
